* Series allocated to an international organization.

** Provisional allocation in accordance with No. S19.33. Between radio communication conferences, the Secretary-General is authorized to deal with questions relating to changes in the allocation of series of call signs, on a provisional basis, and subject to confirmation.

Radio callsigns for the world are set by the ITU – the UN Agency which coordinates all radio activity. The ITU allocates a block or blocks of prefixes to each country, and all callsigns must begin with the specified prefix. This applies to all radio amateurs, aircraft, ships, broadcast, commercial stations etc.

NOTE: Since Morse code is no longer required and the CEPT regulations have changed, the former class 2 licenses are now allowed to operate on HF as well. As far as I know this affects the following prefixes: DG, DB, DD, DC, Tnx DG3OW

DA Germany

DA0 Clubstations

DA1... DA9 = individual licenses issued to members of foreign Nato forces stationed in DL.

Both, VHF licenses and full privilege licenses

DB Germany VHF licenses

DB0 Repeaters, beacons, club stations with VHF license

DB1... DB9 = VHF licenses

DC full privileges (since 2007, before just VHF)

DD full privileges (since 2007, before just VHF)

DE examined SWLs

DF full privileges

DF0 Club Stations

DF1.. DF9 = individual licenses

DG VHF licenses

DH Since May 1st 1998 this prefix belongs to the full privilege class. Old licenses have been upgraded.

DI - In 2005 and 2006, two experimental licenses with the DI prefix were issued for beacons operating on 440 kHz on medium waves -- 2005: DI2AG is licensed to, and operated by DJ2LF.

2006: DI2BO is licensed to, and operated by DK8KW

DJ full privileges

DJ0 Legal alien residents

DJ1... DJ9 German citizens
 DK full privileges
 DK0 Club Stations
 DK1... DK9 = Individuals
 DL full privileges
 DL0 = Club Stations
 DL1...DL9 = Individuals
 DM both license classes. DM series will only be used in the boundaries of former East Germany, which used the DM prefix before East Germany went to the Y2..Y9 series. DM calls will only be assigned to radio amateurs, who actually held a DM call in the past. DM: Since 1.1.1999 new DM-calls will be issued to VHF-licensees (also to those who did not hold a license before)
 DN Training Calls, will only be used for formal training of unlicensed prospective hams. Used only by the Trainee NOT by the Trainer, who has his own call
 DO low power 2m/70 cm only calls, plus 5 Meters and 80 Meters since early 2007
 DP expeditionary calls, used only for stations operating outside of Germany in international territories or in space. Also Antarctica
 Thanks To Siegfried Rambaum--KB2YVC & Bert DL3YEI

A short comment to your prefix list, entry for Germany: there have been a few DI calls issued, one for a /mm expedition (DI9AA) in 1954, a second for another one (DI2DR) in 1965, and another (DI2BC) for one-way transmissions from a research institute; see http://www.qsl.at/deutsch/gr_di9aa.html (only available in German at the moment); and there was one DQ callsign for a special station DQ0KBM in 2000, celebrating 100 years of regular wireless service in Germany. From DL2LFH, Jan-Martin

GERMANY NEWS (New Prefixes on the air!). Germany has started to assign DQ and DR-prefixes. Club stations can now apply for 2x1-callsigns like DK2A. All numbers 0-9 mean "club station", there are no 2x1 callsigns for individuals. One more important change: While all DP-prefixes were extraterritorial area before (like DP0GVN, DP0POL in the Antarctica, DP0EPO Munich European Patent Office), now _only_ DP0-DP2 are extraterritorial. 2x1-Callsigns DP3A-DP9Z are "regular short callsigns" for Club stations. European Russia Prefixes and Zones

Asiatic Russia Prefixes and Zones

The Russian Federation consists of 92 'oblasts', which are territorial divisions. Each 'oblast' has two-letter designator, which is equivalent to former USSR three-figure 'oblast' designator. A further unique feature of the Russian call sign allocation system is the ability to determine which oblast the call sign is located in.

This is accomplished by the number and the letter following the number. For example, in the call sign RA9AE, the '9A' designates a station from the Chelyabinskaya oblast; in the call sign RW3FO, the '3F' designates a station from Moskovskaya oblast; in the call sign RK3AWL, the '3A' designates a station from Moscow City (considered a separate oblast); and so forth.

The most common call signs are the six alphanumeric call signs 2x3 (such as RA3APW); these call signs are used by class IV, III, II operators, roughly equivalent (in order) to US Technician, Technician Plus, and General or Advanced class licensees. 1st class operators may use 2x3 call sign too. Five alphanumeric call signs (2x2, as in RA3XO) are used by the class I (the highest level attainable) individual license class, equivalent to US Extra class licensees. Club stations use six alphanumeric character call signs with the second letter W-Z (2x3, such as RW6AWT or RK9CWW).

'Ordinary' special calls begin with prefix UE (such as the recent special Red Banner Pacific Fleet special event station call sign UE56MM, broadcast from a former Soviet (Navy submarine). Using UE's in contests is strictly forbidden.

Also special calls may have the following alphanumeric designators: 1x2 ("R" + figure + two letters), 1x3 (such as R1FJL, a special DXpedition call sign designating the location as Franz Josef Land) or 2x1 (such as RW2F, a special contest call of RK2FWA club station from Kaliningradskaya oblast).

WAA-WZZ United States of America Also See AA thru AL, N, and K

W United States (ITU Zone 6,7,8 CQ Zone 3,4, 5)

The first one or two letters identify the country the station is licensed in.

The prefix letters used for stations in the United States are...

A (AA-AL), e.g., AC6V

K (KA-KZ), e.g., K6DX, KC6UQH

N (NA-NZ), e.g., N6KI
 W (WA-WZ), e.g., W6AM

The number indicates the U.S. district of license. The U.S. is broken down into 10 regions (0-9). See Below.
 (NOTE: US Amateurs may keep their calls when moving to another district--so a W1 may in fact reside in California (W6))

The suffix (last one, two, or three letters) are unique.

Callsigns may reflect the license class, although many keep a lesser callsign when upgrading.
 A 2-by-3 [two letters, a number, and three letters] callsign typically belongs to a Novice or Technician operator, e.g., KC6UQH. Also some of the newer General operators have a 2-by-3 call.

A 1-by-3 callsign usually belongs to older Technician and General class operators. e.g., N6AEK. These callsigns were 'used up' in the sequential callsign system, so newer Tech and General operators are now receiving 2-by-3 calls.

A 2-by-2 call usually belongs to an Advanced or a newer Extra class operator. An Extra 2-by-2 usually starts with an 'A'. e.g., AC6HZ. An Advanced 2-by-2 usually starts with a 'K', 'N', or 'W'. e.g., KB5MU

A 1-by-2 or 2-by-1 call usually belongs to an older Extra class operator. e.g., N6ST, AC6V. When these sequential callsigns were 'used up', the Extra class operators started receiving 2-by-2 calls starting with the AA block.

A 1-by-1 callsign is very special. It is assigned to a special event station for a short period of time. They are not assigned to individual operators as their regular callsign. e.g., W0W See URL: [1X1 Calls](#)
